

# Foster care: why it matters, how it works, and the future of foster care

Summer 2019

# Why focus on foster care?

---

## **The foster system is responsible for a small, concentrated group of many of the most vulnerable children in the US**

- Less than 1% of US children, roughly .5M, are in the foster system
- Children in foster care are 3.4x more likely to experience childhood trauma
- Most children in foster care are removed from parents due to household and parental factors, not child-specific circumstances<sup>1</sup>
- Children from certain demographic backgrounds are overrepresented in the foster care system (i.e., black and Native children, LGBTQ+ children)<sup>2</sup>

## **Children's experience of foster care comes at a critical time in their development and is heavily influenced by external factors**

- ~50% of kids entering foster care are 5 years old or younger
- Childhood trauma (i.e., abuse, neglect) permanently affect brain development and is correlated with risk of medical/behavioral conditions
- Children's pathways and outcomes are varied and depend on many factors, including judicial discretion, case manager turnover, placement setting, parental case plan performance, and caregiver characteristics

## **The child welfare system has the potential to be a nexus for interventions for a vulnerable population more broadly**

- Many children remain in the care of high-need / at-risk families upon exiting the system<sup>3</sup>
- Spend on programs for foster system alumni who age out of the system is 10x more than the cost of foster care<sup>4</sup>
- The foster system can serve as a center to coordinate interventions across multiple systems during childhood and into adulthood and through family-centered interventions

<sup>1</sup> 62% of children are removed for parental neglect, while fewer than 10% are removed because of a behavioral problem.

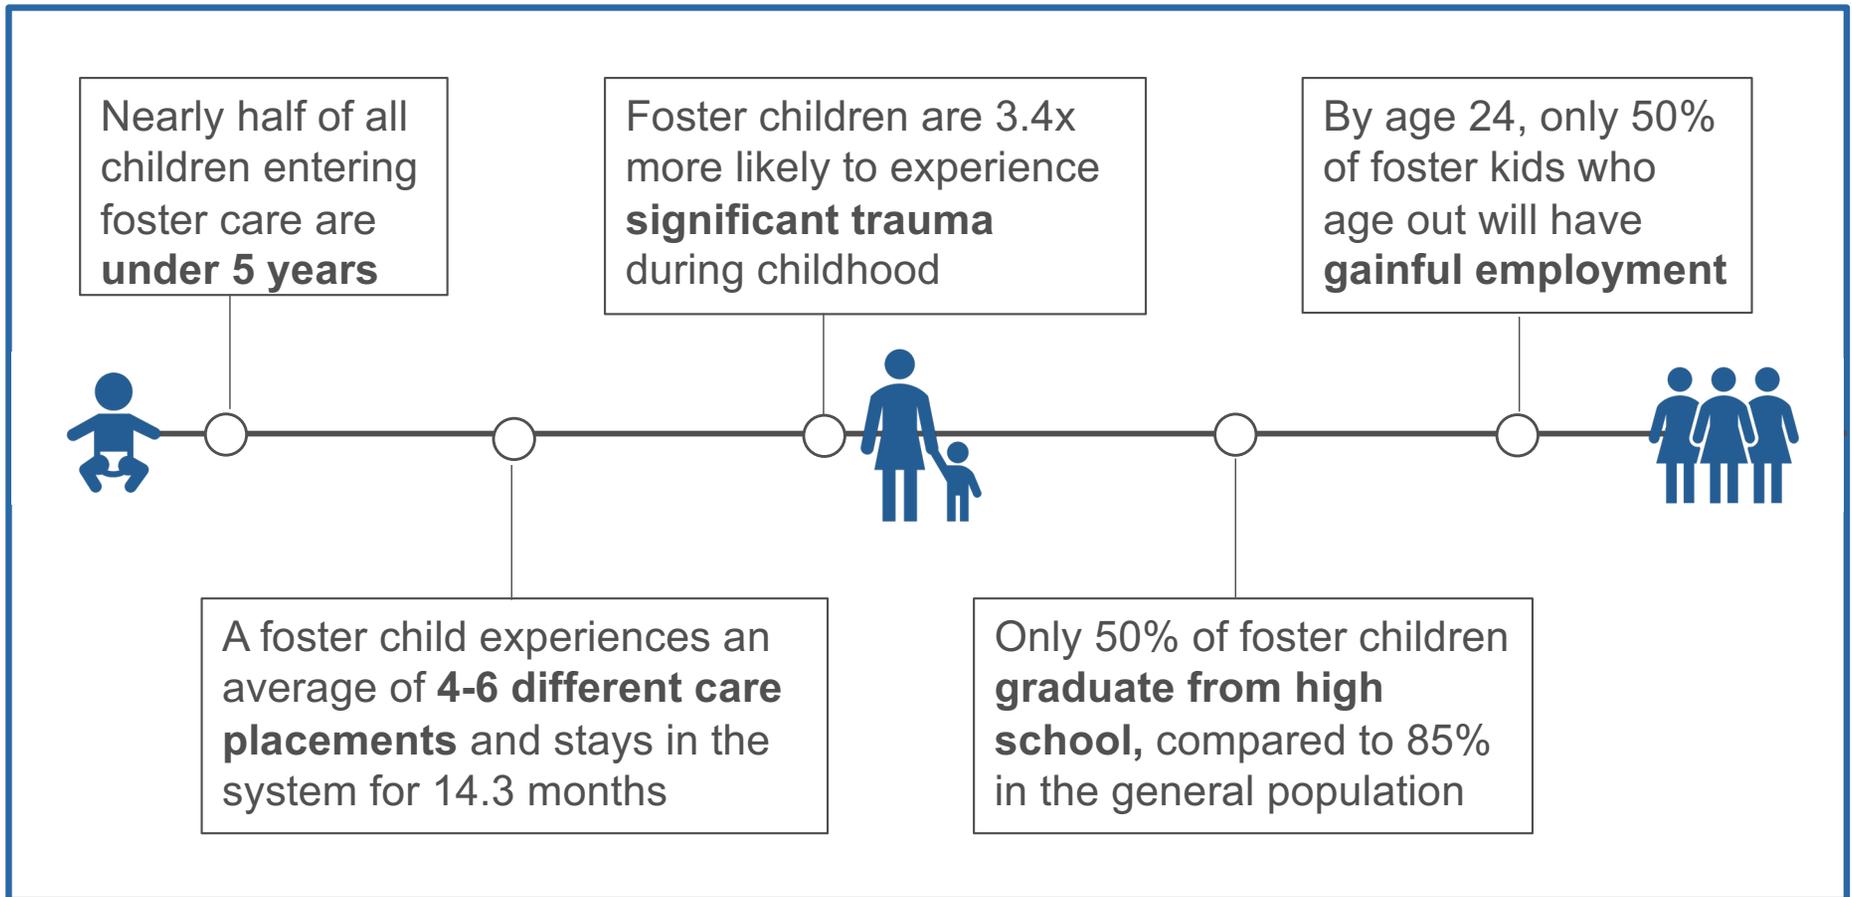

<sup>2</sup> Black and Native children are 2x more likely to be in foster care than white children. LGBTQ children are also overrepresented relative to their share of the general population.

<sup>3</sup> 55% of children are reunified with their parents or are adopted by kin, with an additional 10% living with kin as guardians.

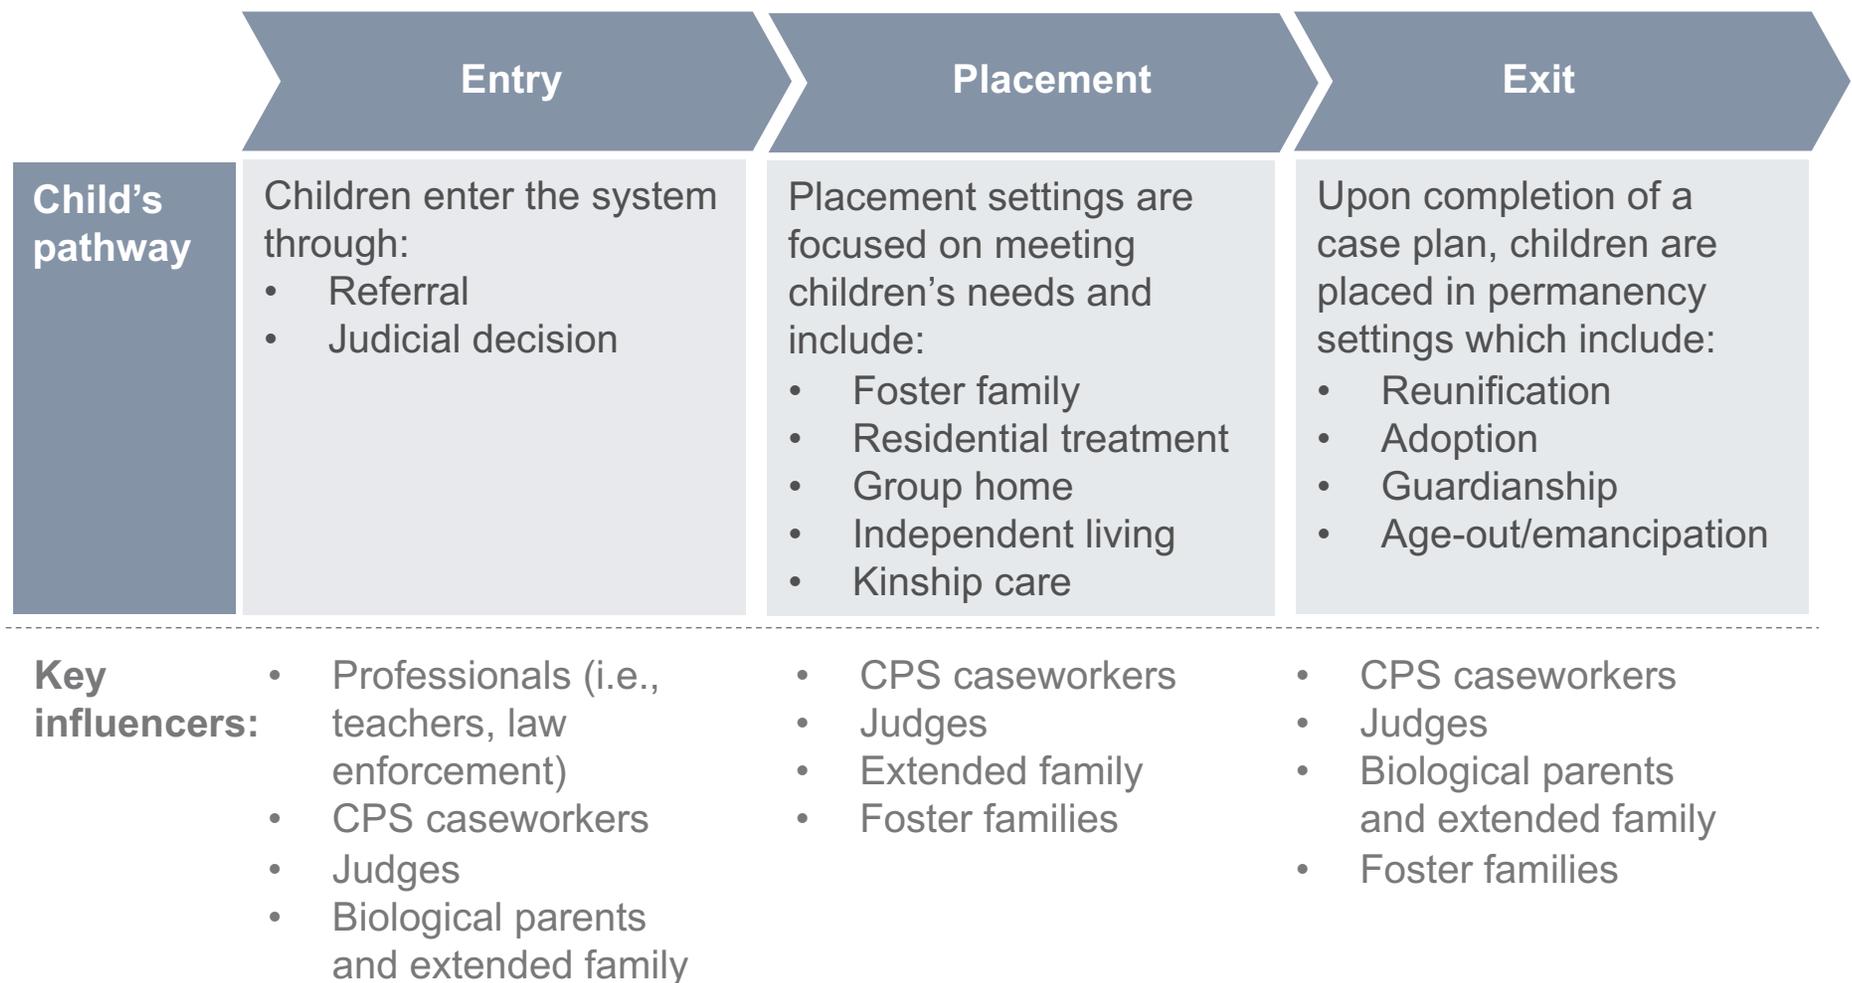

<sup>4</sup> Cost compares maintenance and administrative payments for average stay in foster care to projected social service spending for the child over the course of life.

Note: see line-by-line source references in following detail pages.

## Children in foster care are a vulnerable population with high likelihood of poor outcomes in adulthood

# Overview of the child's pathway through the foster system

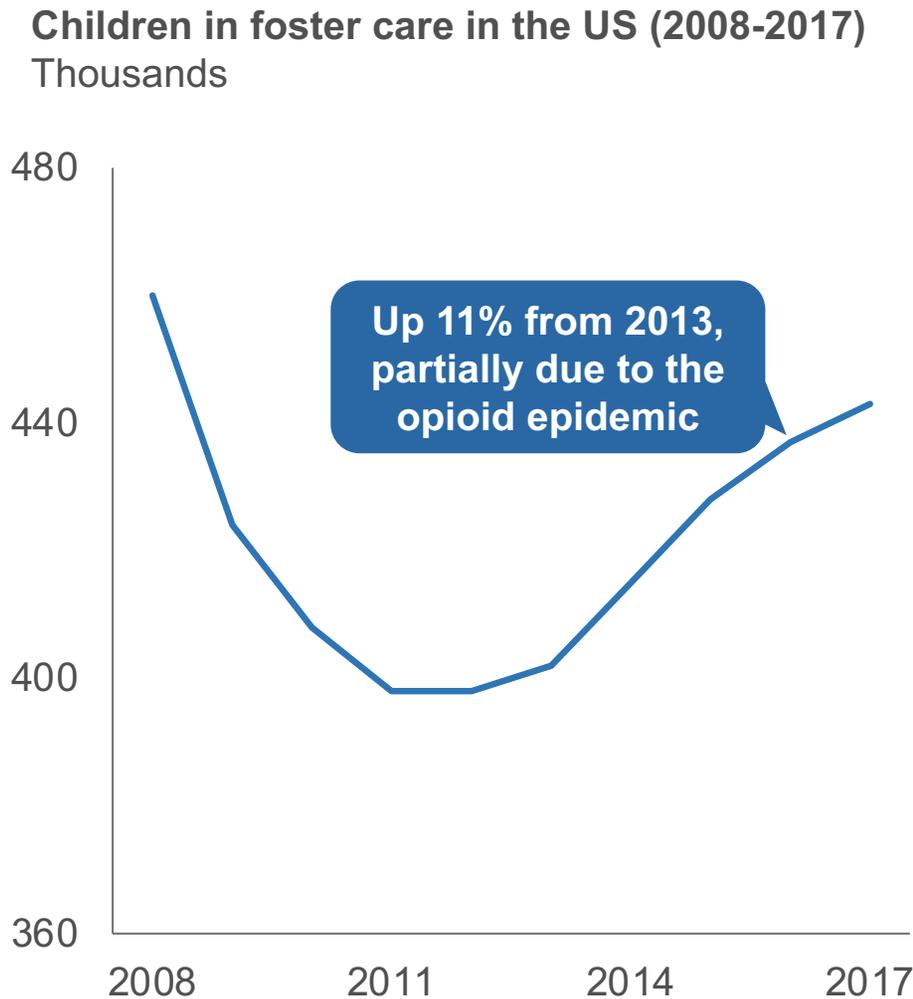

# Contents

---

- **Understanding children in foster care**
  - Understanding the foster system today
  - Foster care systems of the future

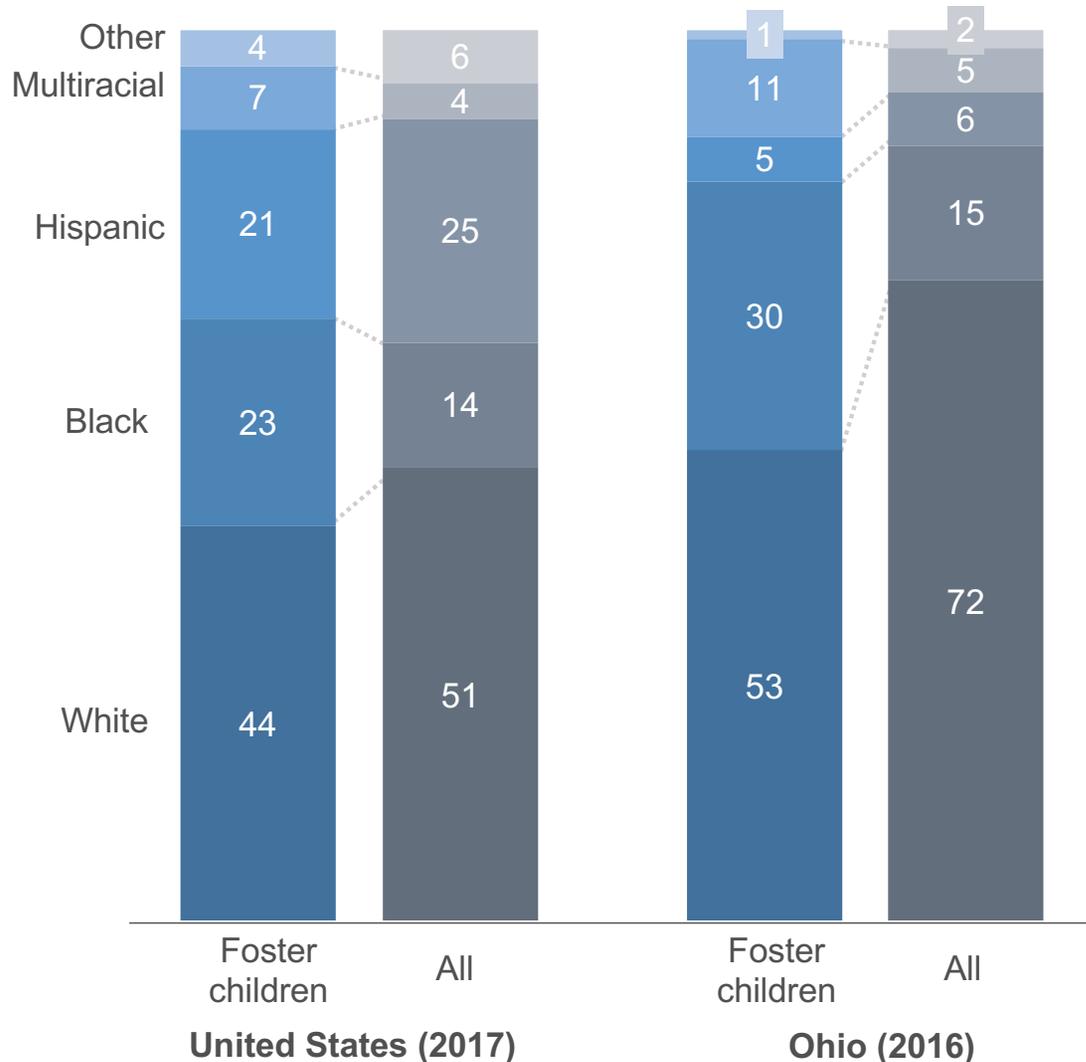

## There are close to half a million children in foster care nationally with a recent uptick due partially to the opioid epidemic

- **There were 440K kids in foster care in 2017**, with 270K entering each year and an average stay of 14.3 months
- **Foster care accounts for a small portion of kids being raised out-of-home** – with up to 20x as many children being raised by kin outside the system as are in the system
- **Foster care is responsible for a small number of children:** <1% of kids in the US are in the foster system, making it a prime population for highly focused interventions

# Black and multiracial children are twice as likely to be in foster care than white or Hispanic children

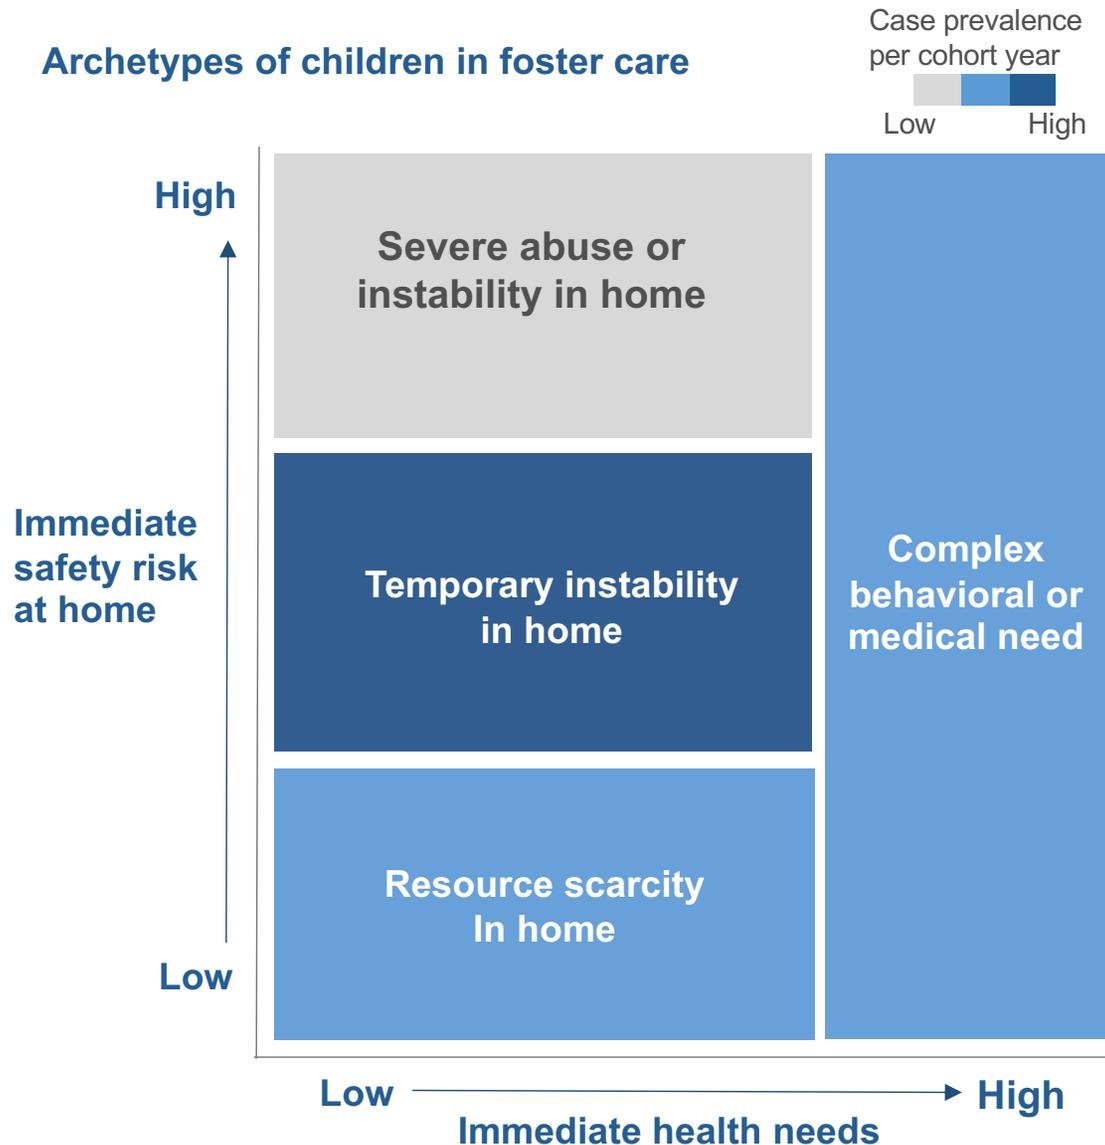

**Race of children in foster care and general population**  
Percent

- **Black and multi-racial children are overrepresented in foster care**
  - Nationally, black and multiracial children are 2x more likely to be in foster care than white or Hispanic children
  - In Ohio, black and multiracial children are 2.7x more likely to be in foster care than white or Hispanic children
- **Race and ethnicity play a role in effective foster care placement** - cultural dissimilarity in foster homes can affect foster youths' adjustment to their placement

A child's path through the system depends on several factors related to their entry such as home safety and health needs

### Archetypes of children in foster care

#### Severe abuse or instability in home

- Reunification infeasible
- Case plan is often adoption; leads to longer stays and increased need for permanency planning

#### Temporary instability in home

- Remediable abuse or neglect, reunification is a feasible goal
- Case plan for temporary removal

#### Resource scarcity in home

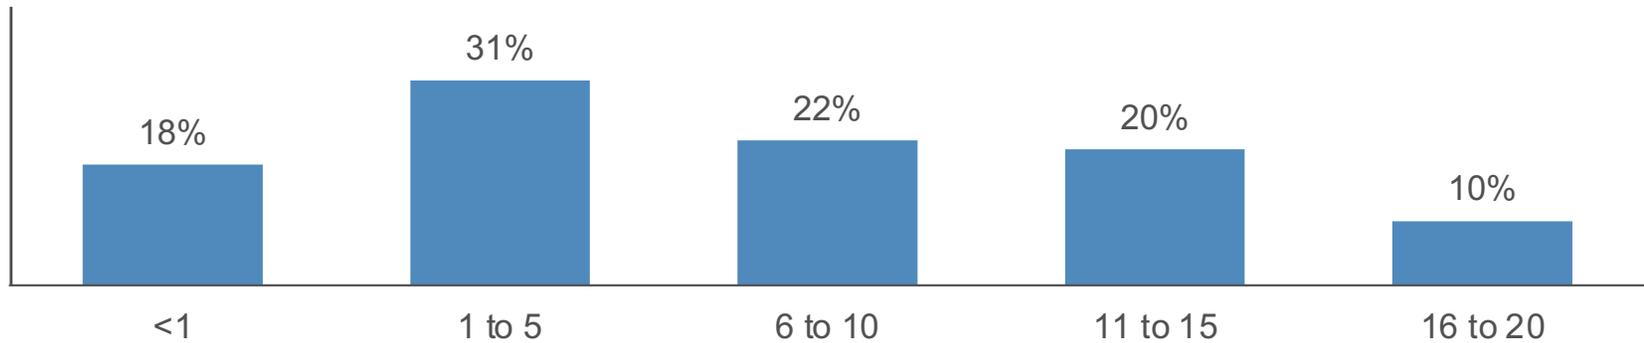

- Household lacks resources (e.g., housing, food, parental attention)
- Removal avoidable with additional supports

#### Complex behavioral or medical need

- Child requires specialized care not possible in traditional home setting
- Generally placed in institutional setting; often voluntarily

# Nearly half of kids entering foster care are 5 years old or younger, in a critical period for childhood development

Age of children in foster care, percent of total children entering and exiting (2017)

**Development goals**

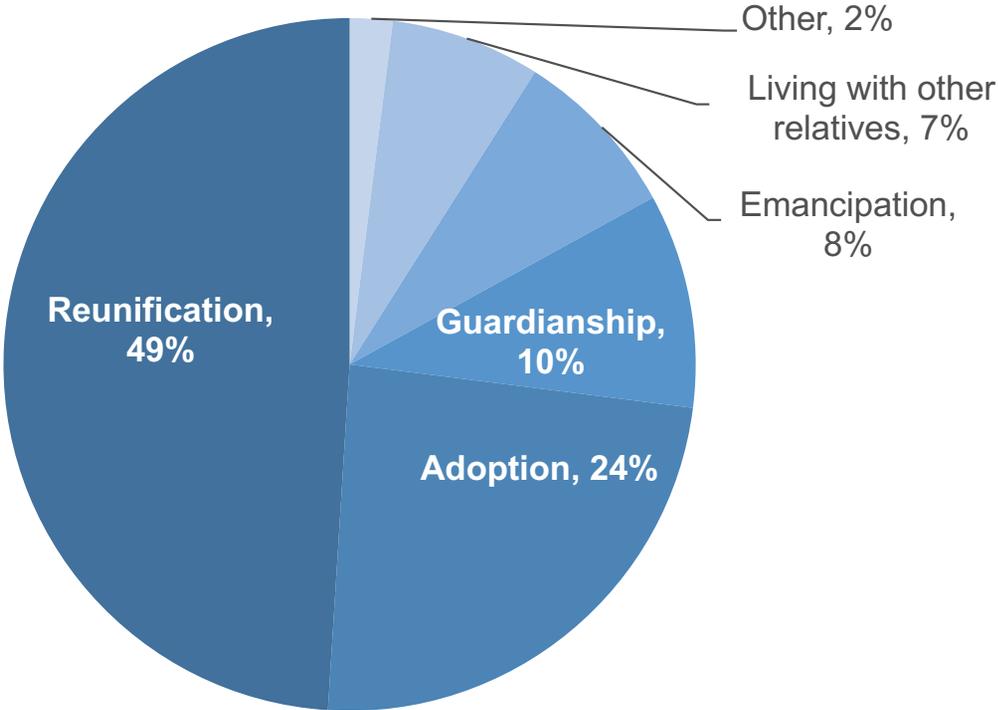

- |   |   |   |  |  |
|---|---|---|--|--|
| <ul style="list-style-type: none"> <li>• Early sensory-motor development</li> <li>• 1M+ new neural connections / sec</li> </ul> | <ul style="list-style-type: none"> <li>• Early language development</li> <li>• Brain reaches 90% of adult volume</li> </ul> | <ul style="list-style-type: none"> <li>• Beginning emotional reg</li> <li>• Brain reaches 100% of adult volume</li> </ul> | <ul style="list-style-type: none"> <li>• Begin planning for future</li> <li>• Learn through decision-making</li> </ul> | <ul style="list-style-type: none"> <li>• Continues to mature through age 25</li> </ul> |
|---|---|---|--|--|

- 50% of children in foster care enter the system before age 5, a critical time for child brain development
- 10% of children enter foster care at age 16 or older, which significantly decreases their likelihood of achieving permanent placement with an adoptive family
- Children entering the foster system at different ages will require different additional supports to supplement healthy development

# Half of cases result in reunification, with adoption and guardianship accounting for an additional third

- Many children remain in the care of high-risk families upon leaving the system, with about half reunified with their parents less than 15 months after initial removal
- About 10% of children leave without permanent placement (i.e., runaways and/or emancipation)
- The majority of children are in foster care for less than 3 years; ~30% are in the system for longer than 3 years
- The median length of stay in foster care is ~14 months; courts move to terminate parental rights if a child is in foster care for 15 of the past 22 months

**Exit outcomes**  
Percent of children exiting

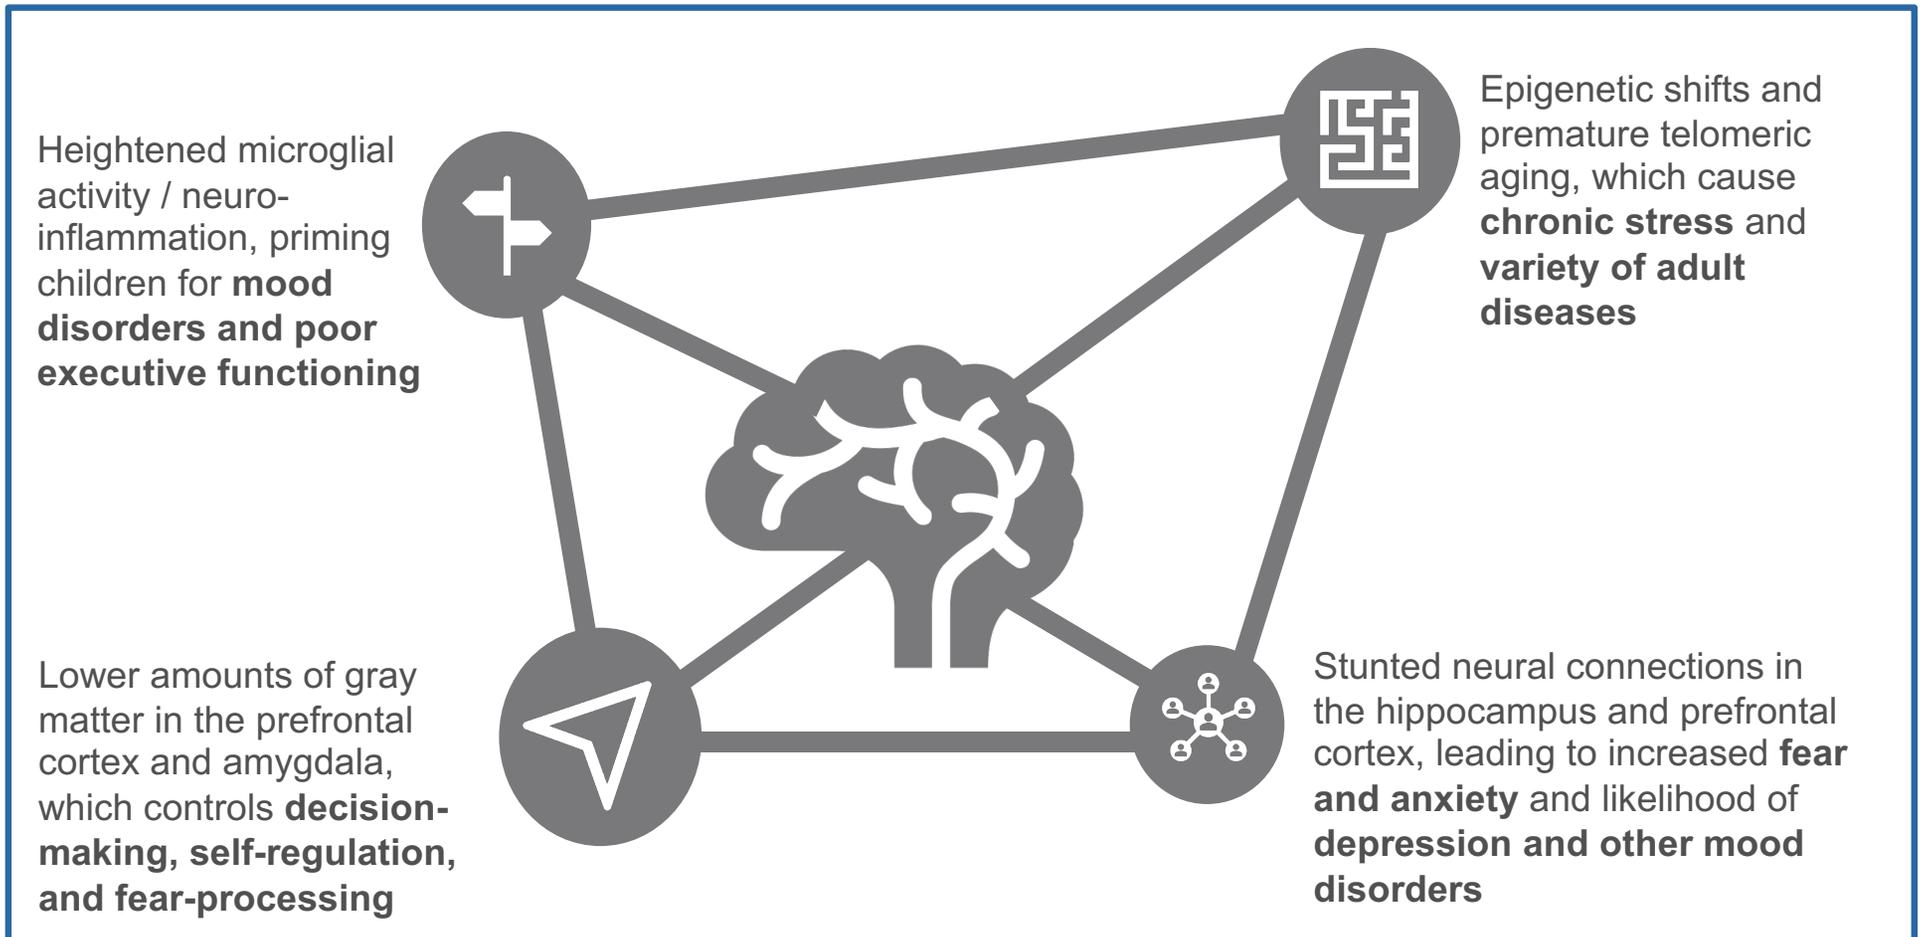

**Length of stay in foster care (2017)**  
Percent of cohort entering foster care

# Foster children are 3.4x more likely to experience significant childhood trauma, which fundamentally alters brain development and adult wellbeing

1 42% of foster children experienced at least four ACEs, compared to 12.5% of the general child population.

Source: Pamela Clarkson Freeman, *Prevalence and relationship between adverse childhood experiences and child behavior among young children* (2014). National Conference of State Legislatures, *Mental health and foster care*

# Throughout their lives, foster care alumni have significantly higher rates of behavioral health problems

# Foster alumni remain highly vulnerable into adulthood, interacting with many social service organizations

<b>Education</b>	<ul style="list-style-type: none"><li>• 3x more likely to drop out of high school than other low-income children</li><li>• ~50% graduate from high school, compared to 86% of other children</li><li>• Less than 3% will graduate from college</li></ul>
<b>Employment</b>	<ul style="list-style-type: none"><li>• For those who age out of the foster system, only half will have be gainfully employed by age 24</li><li>• Many others are underemployed due to low educational achievement</li></ul>
<b>Health</b>	<ul style="list-style-type: none"><li>• Higher prevalence of behavioral and mood disorders than adult population</li><li>• 7.2x more likely to experience drug dependence and 1.5x more likely to experience alcohol dependence</li></ul>
<b>Criminal justice</b>	<ul style="list-style-type: none"><li>• Foster youth in group homes are 2.5x more likely to be incarcerated than those in foster families</li><li>• 90% of foster kids with 5+ placements will become involved in the justice system</li></ul>
<b>Housing</b>	<ul style="list-style-type: none"><li>• More than 20% of the children who were in foster care will become homeless</li><li>• By age 21, 30% of foster alumni will have moved at least 3 times since exiting care</li></ul>
<b>Other</b>	<ul style="list-style-type: none"><li>• Women in foster care are 2x as likely to become pregnant by age 19 when compared to peers not in foster care; 70% will be pregnant by 21</li><li>• 75% of female foster alumni were on public assistance by age 24</li></ul>

Miriam Krinsky, *Disrupting the pathway from foster care to the justice system – a former prosecutor’s perspectives on reform* (2010).

These factors result in costly lost potential and increased social service usage among children aging out of foster care

### Costs of lost human potential

- **\$1.9B per year in lost earnings** due to low educational achievement
- **\$430M per year in lost taxes** due to underemployment

### Costs of social service utilization

- **\$250M per year for social services** to support unplanned, early childbearing
- **\$5.2B per year** for costs associated with **criminal justice**

**\$7.8B per cohort**  
*or*  
**\$300k per child aging out of the child welfare system**

Note: Foster care cost was calculated using the annual cost of administration and maintenance multiplied by the average length of stay in foster care; does not include Medicaid spend.

- Understanding children in foster care
- **Understanding the foster system today**
- Foster care systems of the future

# Overview of the foster care system and implications for innovation

## A majority of case referrals come from professionals and most are not pursued beyond initial investigation

- Most cases are not pursued beyond initial investigation
  - More than **half of cases flagged to CPS are dismissed** with no response beyond cursory investigation
  - Only **8%** of children referred will be **placed in foster care**
- 30% of reports are made by professionals **already interacting with the child in a public services capacity**
  - ~20% in law enforcement
  - ~10% in other social services (e.g., JFS)

<sup>1</sup> Professionals encounter the children they refer through their job, whereas non-professionals encounter children in a personal or familial capacity.

Source: CWIG, *Child Maltreatment 2016: Summary of Key Findings* (2016).

# In cases with removal, children are removed from the home primarily due to parental or household factors

Parental drug and/or alcohol use is a factor in at least 1/3<sup>rd</sup> of cases

Parent / household factors in removal	%
Neglect	62%
Drug abuse by parent	36%
Caretaker inability to cope	14%
Physical abuse	12%
Housing	10%
Parent incarceration	7%
Abandonment	5%
Alcohol abuse by parent	5%
Sexual abuse	4%
Parent death	1%
Relinquishment	1%

Parents voluntarily relinquishing their rights is extremely rare

Child-related factors in removal	%
Child behavior problem	9%
Drug abuse by child	2%
Alcohol abuse by child	<1%

A child's health or behavior is very rarely the cause for their removal

<sup>1</sup> Many children are removed due to a combination of these circumstances; thus, percentages do not add to 100. Source: AFCARS Report #25, *Children in Foster Care in the United States* (2017).

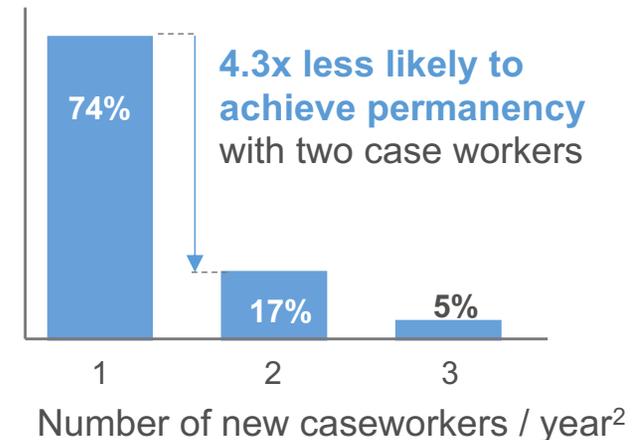

# Beginning with investigation and removal, caseworkers play a central role throughout the child welfare system

- Caseworkers play a variety of roles (i.e., investigator, monitor, witness, and expert) and cite burnout, compassion fatigue, and secondary trauma
- The average caseworker is responsible for 31 children at the same time, which is twice the recommended amount
- Casework requires a bachelor degree, but average salary is well below the median at \$44k

## Caseworker turnover is a costly problem for children and agencies alike

- Caseworker turnover rate is 40% within 1 year of starting a position
- Children with only one caseworker in a year are ~5x more likely to achieve permanency than those who have 2 or more caseworkers
- Turnover is costly to foster agencies, who spend 30 to 200% of a caseworker's salary on hiring and training for new replacements

## Child's probability of achieving a permanency outcome (%)

<sup>1</sup> The recommended amount set by the National Association of Social Workers in 2004 and has remained unchanged.

<sup>2</sup> The number of caseworkers a child is assigned may be connected to factors complicating permanent placement (i.e., case difficulty), as well as caseworker turnover. Source: CWLA, *Ohio's Children 2018*. National Association of Social Workers, *If you're right for the job, it's the best job in the world* (2004). Casey Family Programs, *How does turnover effect outcomes and what can be done to address retention* (2017).

## Different foster care placement settings are designed to meet the varied needs of children in foster care

<b>Setting</b>	<b>Description</b>	<b>Key population</b>	<b>Placement frequency</b>
<b>Home care</b>	<ul style="list-style-type: none"> <li>Foster care – placement with nonrelative, partial reimbursement for costs of care</li> <li>Kinship care – placement with relative or others familiar to the child, sometimes reimbursed at lower rates</li> </ul>	<ul style="list-style-type: none"> <li>Victims of abuse and neglect</li> </ul>	81%
<b>Institutional care</b>	<ul style="list-style-type: none"> <li>Residential health care –live-in medical facility, usually to treat advanced behavioral or physical health needs</li> <li>Group home – residential facility with child-focused supports (i.e., education, therapy, play)</li> </ul>	<ul style="list-style-type: none"> <li>Advanced health needs</li> <li>Behavioral problems</li> </ul>	13%
<b>Alternative care</b>	<ul style="list-style-type: none"> <li>Trial home visit – instead of removal, child remains in the home with visits from caseworkers at varied intervals</li> <li>Supervised independent living – young adults live on their own with case management and other support services</li> </ul>	<ul style="list-style-type: none"> <li>Older entrants to foster care (i.e., 16+)</li> </ul>	6%

<sup>1</sup> Provided in only a small number of states.

Source: AFCARS Report #25, *Children in Foster Care in the United States* (2017).

# Licensing and reimbursements vary among different caregiver types within each placement setting

☐ Detail follows

<b>Home care</b>	<b>Traditional foster parent</b>	<ul style="list-style-type: none"> <li>• Licensed upon completion of training and prep activities</li> <li>• Paid a monthly stipend for each foster child, dependent on child age, health, and behavioral complexity</li> </ul>
	<b>Kinship caregiver</b>	<ul style="list-style-type: none"> <li>• Can include both relative and non-relative caregivers</li> <li>• Caregivers don't always receive same supports as foster parents (i.e., maintenance payments, social services)</li> </ul>
	<b>Professional foster parent</b>	<ul style="list-style-type: none"> <li>• Licensed and trained in advanced child behavioral management techniques</li> <li>• Provide care for children with complex needs, and receive higher stipends than traditional foster parents</li> </ul>
<b>Institutional care</b>	<b>Professional clinician / social worker</b>	<ul style="list-style-type: none"> <li>• Trained to treat children with higher behavioral / mental health needs in a medically-focused environment</li> <li>• Often from clinical and social work background</li> </ul>
<b>Alternative care</b>	<b>Social worker</b>	<ul style="list-style-type: none"> <li>• May visit the child in the home or help plan for emancipation by monitoring school attendance and coordinating other social services</li> </ul>

## Additional detail: Foster parents face a time-intensive licensing process

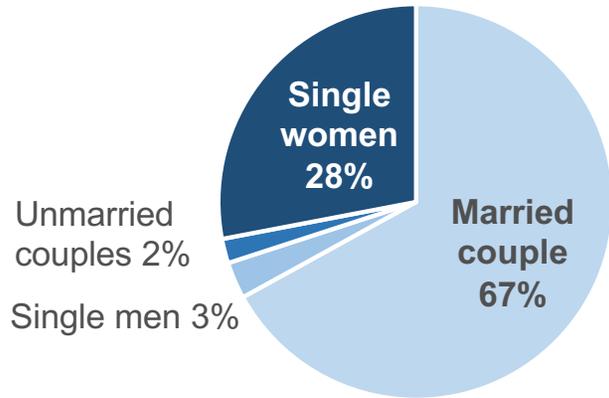

---

**Barriers to licensing and placement** have resulted in a **shortage of appropriate foster homes** for a growing foster population

- **Complex licensing requirements** and cumbersome, infrequent trainings
- **Misconceptions about licensing requirements**, most commonly that unmarried couples and divorced singles are ineligible to foster
- **Preparedness of the home and family**, including income, vaccination records of parents and other children, and physical home structure
- **Cultural fit**, especially language spoken in the home
- **Insufficient reimbursement rates**, especially for children with higher medical needs

# Foster parents tend to be married couples with below-average family income

Relationship status of foster parents

**There is untapped opportunity to recruit foster parents from different demographics:**

- Unmarried couples make up only 2% of foster families, often perceiving marriage as a prerequisite to foster eligibility
- Single men, especially divorced, make up only 3% of foster parents
- Foster children are disproportionately LGBTQ+ compared to other children, but LGBTQ+ parents are underrepresented in foster care

3% of foster parents are LGBTQ+ compared to 3.5% of the US population

70% of foster parents have education beyond a high school diploma

31% of foster parents are employed full time, same as the national average

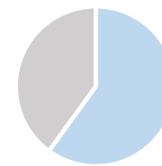

The average foster family earns \$56,364, compared to \$74,301 average

## Detail: Kinship caregivers encounter challenges unaddressed in the current system

- The opioid crisis has prompted many grandchildren into the care of their grandparents while their parents are addicted or in treatment
- Formal kinship is growing, but represents only a fraction of children in the care of relatives - for every child in formal care, there are 20 others being raised by kin outside the child welfare system

**Grandparents face unique challenges** in caring for grandchildren not addressed by limited, per-child payments in kinship care

60% are still in the workforce full-time

30% lack the support of a parent and/or spouse

25% are in poverty and/or disabled

## Detail: Kinship care is associated with positive outcomes for children in out-of-home care

---

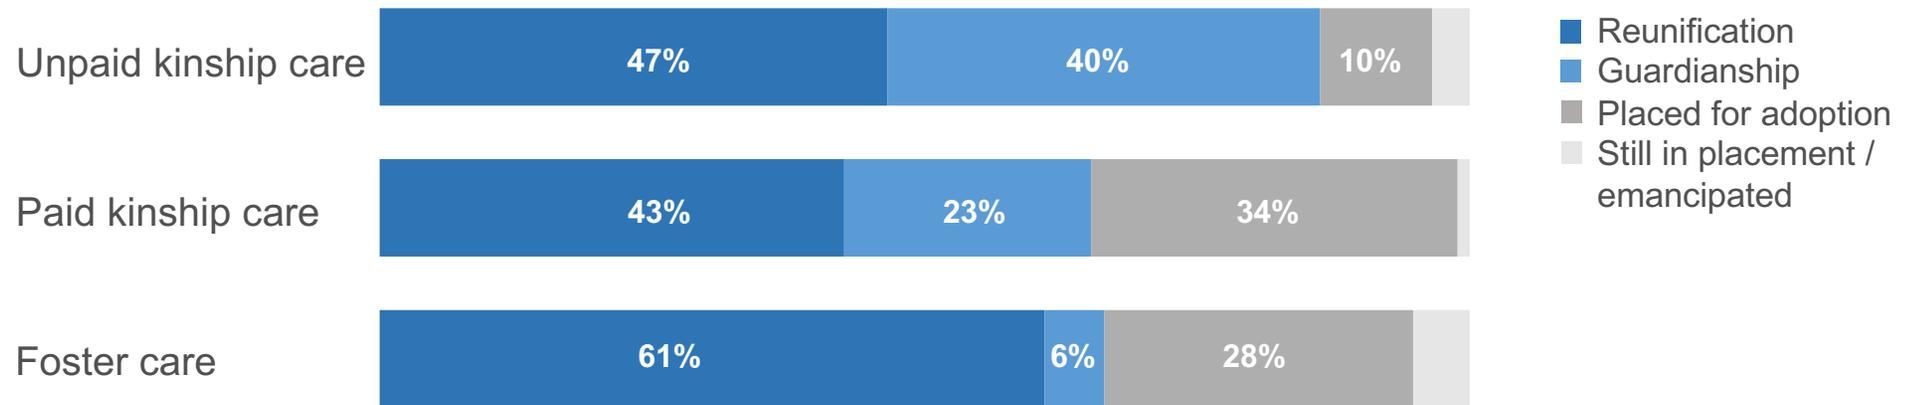

- **Kinship care is connected to higher placement stability**
  - Children placed in kinship care are 5x less likely to experience sudden placement changes
  - Children in kinship care who are reunified with their parents are 60% less likely to re-enter foster care than children placed in foster care
- **Placement in kinship care leads to better behavioral health outcomes and childhood development**
  - Children placed in kinship care show lower levels of externalizing behaviors
  - Kinship care helps preserve children's cultural identity and relationship to their community, which can reduce the trauma of parental separation

<sup>1</sup> I.e., physical aggression, disobedience, theft, property destruction

Source: Helton, *Children with behavioral, non-behavioral, and multiple disabilities, and the risk of out-of-home placement disruption* (2011). Winkour, *Matched Comparison of Children in Kinship Care and Foster Care on Child Welfare Outcomes* (2011). Cheung, *Understanding contextual effects on externalizing behaviors in children in out-of-home care: Influence of workers and foster families* (2011). Children's Defense Fund, *Kinship Care Resource Kit: Helping Grandparents and Other Relatives Raising Children*, Ohio Department of Jobs and Family Services, *Kinship care*.

# Outcomes for children in kinship care differ based on placement setting and caregiver compensation

## Prevalence of permanency outcomes among children in kinship and foster care<sup>2</sup>

### Arrangements where unpaid kinship care is possible result in the highest likelihood of family continuity

- In unpaid care, 87% are reunified or remain under guardianship of family members, compared with 66% in paid kinship and 67% in foster care
- Children in foster care are 3x more likely to be placed for adoption compared with children in unpaid kinship care
- Relationship to reimbursement is not causal; instead, outcomes likely related to increased levels of resources that kinship caregivers able to provide care without reimbursement have

# Contents

---

- Understanding children in foster care
- Understanding the foster system today
- **Foster system of the future**

# The foster care system of the future should be holistic, integrated, and outcomes-focused

## Today

**Reactive to referrals**, treating parents and prioritizing child care over treatment.

**Suboptimal service delivery**, even for foundational child welfare services like placement and behavioral health care.

**Siloed from parallel systems** despite strong overlaps with Medicaid, education, and law enforcement

**Focus on operational administration** and service delivery rather than system improvement.

**Service—based payment** to agencies and parents despite differences in child need and quality of care

## Tomorrow

**Proactive, whole-family approach** – treating issues at the family level before removal from the home is necessary

**Using improved tools** – building and deploying tech-driven tools to improve service delivery along the pathway (e.g., improved placement matching, case mgmt. tools)

**Integrated with parallel systems** – with formal relationships for holistic care in partnership with other child-focused systems

**Funding innovation** – allowing states and their partners to conceptualize and test ambitious alternatives to the current system

**Altered funding structures** – paying based on outcomes, to incentivize innovation and supports unreimbursed in the current system

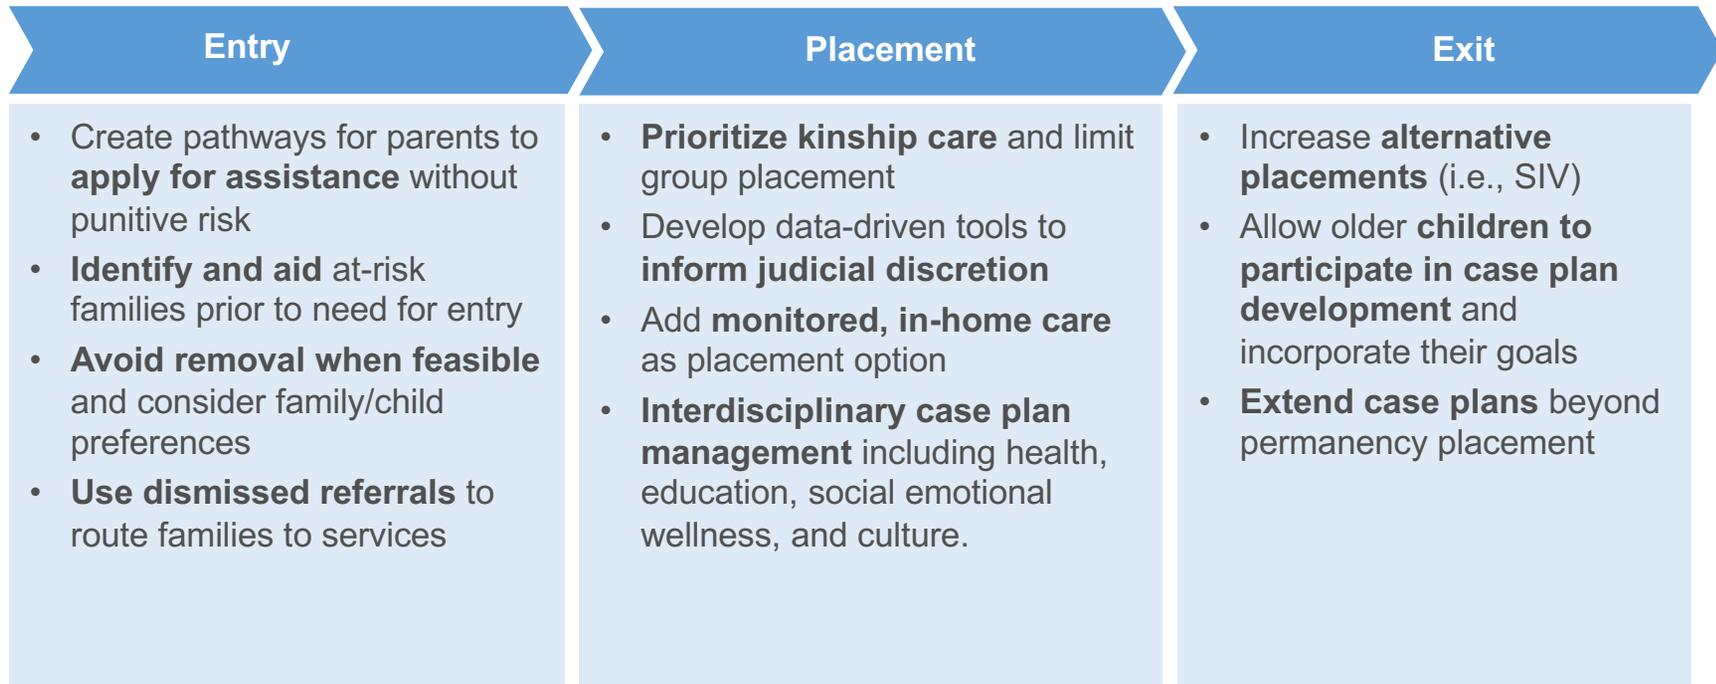

## These changes can be made across the pathway of care in child welfare...

### System-wide problems

- Judicial discretion can allow bias and risk aversion to imperfectly influence case decisions
- Funding for costs of care isn't always tied to a child's level of need, and is rarely connected to outcomes
- Foster care is largely siloed from other systems that interact with children (i.e., Medicaid, education)
- Child welfare system focuses on rehabilitating parents to facilitate reunification while foster parents watch the removed children, while family-centered interventions are less common

... to improve service delivery at discrete moments as well as across the system as a whole

**System-wide problems**

- Establish Title IV-B/E and Medicaid waivers to fund state innovation efforts
- Provide specialized education options for at-risk children
- Design alternative payment models to compensate agencies and foster parents based on child outcomes, giving everyone a stake in children's success
